

# Master Physique

## Physics of Quantum and Soft Condensed Matter

### Présentation

#### English presentation:

[Website of the Master of Physics](#)

Recent advances in physics (high energy physics, quantum physics, condensed matter...) and related disciplines (astrophysics, life sciences, medical treatment and medical imaging...) are based on gathering, in laboratories or within national and international collaborations, a great diversity of skills and knowledge such as:

- Knowledge about fundamental theoretical and experimental physics;
- A broad view of the discipline: currently accepted theories, major open questions and plans to address them...
- Excellent knowledge of practical tools for modeling and analysis (mathematics, statistics, signal processing, database management, numerical simulations, instrumental developments);
- Ease with high-level experimental techniques;
- Teamwork and communication skills (project management, English, report writing, oral presentations).

The main objective of the Master of Physics is to train candidates to fit effectively into this framework, providing them with sound theoretical and practical bases, and giving them the opportunity to start specializing gradually through courses, personal projects and internships. The training aims to provide students with the necessary skills to carry out research and / or development work by focusing on:

- Autonomy in the analysis of a complex problem and the proposal of approaches (theoretical, numerical and / or experimental);
- Solid skills in computing (especially for the analysis of large datasets);
- Collaborative work;
- Ability to communicate scientific results.

The Master of Physics is a research-driven training, leading to fundamental or applied research, work in the *Science, Technology, Engineering and Mathematics* -STEM- industry (especially high-tech) and trades of education or dissemination of science. From a professional point of view, the training prepares either for a career as a researcher or a research engineer in the disciplinary fields concerned, or for a career in a sector where the knowledge and / or skills acquired as physicists prove to be useful. Thanks to a long-standing partnership with [Télécom Physique Strasbourg](#), the Master's degree also assumes the role of contributing to the formation of young engineers. In parallel with research-focused objectives, the Master of Physics also prepares students to pass the French recruitment competition for teachers Agrégation de Physique-Chimie, Option Physique through a specific track PA (Preparation à l'Agrégation). The mastery of the disciplinary foundations of Physics and Chemistry give rise to a solid theoretical and practical professional training in the trades of the education.

The Master of Physics consists of **7 tracks** with of a common first M1 year followed by a specialization at the M2 level. The content of each course is described in the specific pages. The courses are taught in English during the two years. For the main lectures, tutorial classes are duplicated with French and English teaching languages. M1 training consists of a common core of general physics taught through courses and tutorials in the first and second semester. Experimental training is an important part of the curriculum, with projects hosted by local laboratories. During these two semesters, optional courses allow students to discover the different possible tracks and specializations. The ties with ongoing academic research are ensured by weekly seminars given by researchers from Strasbourg laboratories during the first semester. In addition, students will train to actual research work via supervised projects and research internships in physics laboratories through (both in M1 and M2).

#### Résumé français:

Le master Physique de l'Université de Strasbourg est porté par la Faculté de Physique et

Composante	• <a href="#">Faculté de physique et ingénierie</a>
Langues d'enseignement	• Anglais
Niveau d'entrée	BAC +3
Durée	2 ans
ECTS	120
Volume global d'heures	750
Formation à distance	Non, uniquement en présentiel
Régime d'études	• FI (Formation initiale)
Niveau RNCP	Niveau 7
RNCP	• <a href="#">RNCP40720 : Master Physique</a>
Disciplines	<ul style="list-style-type: none"> <li>• Physique - Milieux denses et matériaux</li> <li>• Physique - Milieux dilués et optique</li> <li>• Génie électrique, électronique, photonique et systèmes</li> </ul>
Taux de réussite	On average 80% over the last 10 years
Lieu	Master 1: Campus Esplanade, Master 2: Campus Cronenbourg
Campus	<ul style="list-style-type: none"> <li>• Campus Esplanade</li> <li>• Campus Cronenbourg</li> </ul>
Secteurs d'activité	<ul style="list-style-type: none"> <li>• <a href="#">Fabrication de composants et cartes électroniques</a></li> <li>• <a href="#">Fabrication d'instruments et d'appareils de mesure, d'essai et de navigation ; horlogerie</a></li> <li>• <a href="#">Télécommunications</a></li> <li>• <a href="#">Recherche-développement scientifique</a></li> <li>• <a href="#">Recherche-développement en sciences physiques et naturelles</a></li> <li>• <a href="#">Activités pour la santé humaine</a></li> <li>• <a href="#">Programmation, conseil et autres activités informatiques</a></li> <li>• <a href="#">Enseignement</a></li> <li>• <a href="#">Enseignement secondaire</a></li> <li>• <a href="#">Enseignement supérieur et post-secondaire non supérieur</a></li> </ul>

Ingénierie, en partenariat avec [l'Observatoire d'Astrophysique de Strasbourg \(ObAS\)](#), [Télécom Physique Strasbourg \(TPS\)](#) et [l'École supérieure de biotechnologie de Strasbourg \(ESBS\)](#) et avec les [Instituts Thématiques Interdisciplinaires ITI/EUR HiFunMat, IRMIA++](#) et [QMat](#). Après une première année de formation généraliste fortement mutualisée, il propose 6 parcours orientés vers la recherche -Astrophysics and data science (Astro); Physics of Quantum and Soft Condensed Matter (PhyQS); Cell physics; Radiation physics, detector, instrumentation and imaging (PRIDI); Subatomic and astroparticle physics (SAP) and Quantum Technologies-European Program -s'appuyant sur les laboratoires Strasbourgeois et un parcours permettant de préparer le concours de recrutement de l'Agrégation de Physique-Chimie-Option Physique.

## Objectifs

**English version:**

**For more details, please consult the dedicated website of the PhyQS Master:**  
<https://mphys-condmat.unistra.fr/>

The specialty Physics of Quantum and Soft Condensed Matter (PhyQS) is one of the seven specialties offered in the second year (M2) of the Master of Physics. The first year (M1) of the Master of Physics is common to all specialties. The PhyQS Master aims to provide physicists with a broad fundamental training, suitable for both experimental and theoretical research. The first semester of the PhyQS track includes a core advanced courses on quantum mechanics applied to condensed matter physics, statistical physics and radiation-matter interaction. In parallel, students can, through their choice of elective courses, orient their training either towards quantum sciences and nanomaterials (electronic, optical, magnetic, spintronic properties of low-dimensional, mesoscopic or open quantum systems...), or towards the physics of soft matter and complex systems (surfaces and interfaces, complex fluids, colloids, active matter...). A project, focusing of modern topics in condensed matter physics is proposed during the first semester. This project can be experimental, numerical or both. The second semester consists in a research internship of at least four months.

**French version:**

**Pour plus d'informations, veuillez consulter le site dédié du M2 PhyQS :**  
<https://mphys-condmat.unistra.fr/>

La spécialité Physique de la matière quantique et matière molle est l'une des sept spécialités offerte en deuxième année de master de physique. La première année du master de physique (M1) est commune à toutes les spécialités. Le premier semestre du parcours PhyQS comprend un tronc commun de cours de mécanique quantique avancée appliquée à la physique de la matière condensée, de physique statistique et à d'interaction rayonnement-matière. En parallèle, les étudiants peuvent orienter leur formation soit vers les sciences quantiques et les nanomatériaux (propriétés électroniques, optiques, magnétiques, spintroniques des systèmes quantiques de basse dimension, mésoscopiques ou ouverts...), soit vers la physique de la matière molle et des systèmes complexes (surfaces et interfaces, fluides complexes, colloïdes, matière active...) grâce un large choix de matières. Un projet axé sur des sujets contemporains en physique de la matière condensée est proposé au premier semestre. Ce projet peut être expérimental, numérique ou les deux. Le deuxième semestre consiste en un stage de recherche d'une durée minimale de quatre mois.

## Métiers visés

The aim of the Master is to train physicists who can hold senior positions in public research institutions (Researcher, Researcher-Teacher or Research Engineer), R & D engineers or management positions in industry, and teachers in secondary or higher education.

Pour connaître en détail l'insertion professionnelle de nos diplômés, consultez [cette page](#).

## Les + de la formation

- State of the art theoretical, experimental and numerical skillset
- Multidisciplinary training in condensed matter physics (quantum physics and quantum materials, physics of low-dimensional nanostructures, light-matter interaction, complex systems, soft matter, etc.)
- Direct exposure to an international research environment. Extended research internship.

## Critères de recrutement

**M1:** Bachelor degree or equivalent (French or foreign "licence") in physics or applied physics.

**M2:** The direct admission to the M2 level is possible for students with strong academic records that have the M1 level.

## Candidater

Code ROME	<ul style="list-style-type: none"><li>• <a href="#">Ingénieur / Ingénieure de recherche scientifique</a></li><li>• <a href="#">Professeur / Professeure des universités</a></li><li>• <a href="#">Ingénieur / Ingénieure R&amp;D en industrie</a></li></ul>
Stage	Oui
Alternance	Non

## Aménagements pour les publics ayant un profil spécifique

Voir la page du [régime spécial d'études \(RSE\)](#)

## Droits de scolarité

- To know about the registration fees, [check the dedicated page on the site of the University of Strasbourg](#)
- Pour connaître les droits de scolarité, consultez la page dédiée [sur le site de l'Université de Strasbourg](#).

## Contacts

### Responsable(s) de parcours

- [Stephane Berciaud](#)
- [Thierry Charitat](#)

### Référente administrative

- [Mathilde Battaglia](#)

- Pour connaître les modalités de candidature, consultez [la page dédiée](#) sur le site de l'Université de Strasbourg.

## Prérequis obligatoires

### At the M1 level

- All the courses of this master are taught in English. B2 level (CEFR scale) is required.
- Our master of Physics assumes that candidates should have a solid knowledge of classical mechanics and classical electrodynamics. The students should as well know and be able to apply the laws of quantum mechanics.
- Some experience with programming languages is needed.

### At the M2 level

- All the courses of this master are taught in English. A B2 level (CEFR scale) is required.
- A knowledge of a programming language and algorithmic (ex: C, Python ...) is strongly recommended to be able to adequately follow some optional trainings.
- Candidates must have a strong background in modern physics (Electrodynamics, quantum mechanics, statistical physics, condensed matter physics).
- The Master's program is intensive, and it is not possible to have a parallel job. Financial resources must be guaranteed. Students with very good academic records may apply for the [Master QMat scholarship](#).

### French version

#### Au niveau M1

- Tous les cours de ce master sont dispensés en anglais. Le niveau B2 (échelle CECR) est requis.
- Notre master de physique suppose que les candidats possèdent une solide connaissance de la mécanique classique et de l'électrodynamique classique. Les étudiants doivent également connaître et être capables d'appliquer les lois de la mécanique quantique.
- Une certaine expérience avec les langages de programmation est nécessaire.

#### Au niveau M2

- Tous les cours de ce master sont dispensés en anglais. Un niveau B2 (échelle CECR) est requis.
- La connaissance d'un langage de programmation (ex : C, Python ...) est fortement recommandée pour pouvoir suivre certaines formations optionnelles.
- Les candidats doivent avoir une solide expérience en physique moderne (électrodynamique, mécanique quantique, physique statistique, physique de la matière condensée).
- Le programme de Master est intensif et il n'est pas possible d'avoir un emploi en parallèle. Les ressources financières doivent être suffisantes. Les étudiants ayant de très bons résultats académiques peuvent postuler pour [la bourse Master QMat](#).
