

Master Physique

Cell Physics

Présentation

English presentation:

Recent advances in physics (high energy physics, quantum physics, condensed matter...) and related disciplines (astrophysics, life sciences, medical treatment and medical imaging...) are based on gathering, in laboratories or within national and international collaborations, a great diversity of skills and knowledge such as:

- Knowledge about fundamental theoretical and experimental physics;
- A broad view of the discipline: currently accepted theories, major open questions and plans to address them...
- Excellent knowledge of practical tools for modeling and analysis (mathematics, statistics, signal processing, database management, numerical simulations, instrumental developments);
- Ease with high-level experimental techniques;
- Teamwork and communication skills (project management, English, report writing, oral presentations).

The main objective of the Master of Physics is to train candidates to fit effectively into this framework, providing them with sound theoretical and practical bases, and giving them the opportunity to start specializing gradually through courses, personal projects and internships. The training aims to provide students with the necessary skills to carry out research and / or development work by focusing on:

- Autonomy in the analysis of a complex problem and the proposal of approaches (theoretical, numerical and / or experimental);
- Solid skills in computing (especially for the analysis of large datasets);
- Collaborative work;
- Ability to communicate scientific results.

The Master of Physics is a research-driven training, leading to fundamental or applied research, work in the *Science, Technology, Engineering and Mathematics* -STEM- industry (especially high-tech) and trades of education or dissemination of science. From a professional point of view, the training prepares either for a career as a researcher or a research engineer in the disciplinary fields concerned, or for a career in a sector where the knowledge and / or skills acquired as physicists prove to be useful. Thanks to a long-standing partnership with [Télécom Physique Strasbourg](#), the Master's degree also assumes the role of contributing to the formation of young engineers. In parallel with research-focused objectives, the Master of Physics also prepares students to pass the French recruitment competition for teachers Agrégation de Physique-Chimie, Option Physique through a specific track PA (Préparation à l'Agrégation). The mastery of the disciplinary foundations of Physics and Chemistry give rise to a solid theoretical and practical professional training in the trades of the education.

The Master of Physics consists of **7 tracks** with of a common first M1 year followed by a specialization at the M2 level. The content of each course is described in the specific pages. The courses are taught in English during the two years. For the main lectures, tutorial classes are duplicated with French and English teaching languages. M1 training consists of a common core of general physics taught through courses and tutorials in the first and second semester. Experimental training is an important part of the curriculum, with projects hosted by local laboratories. During these two semesters, optional courses allow students to discover the different possible tracks and specializations. The ties with ongoing academic research are ensured by weekly seminars given by researchers from Strasbourg laboratories during the first semester. In addition, students will train to actual research work via supervised projects and research internships in physics laboratories through (both in M1 and M2).

Résumé français:

Le master Physique de l'Université de Strasbourg est porté par la Faculté de Physique et Ingénierie, en partenariat avec [l'Observatoire d'Astrophysique de Strasbourg \(ObAS\)](#), [Télécom Physique Strasbourg \(TPS\)](#) et [l'École supérieure de biotechnologie de](#)

|------------------------|---|
| Composante | • Faculté de physique et ingénierie |
| Langues d'enseignement | • Anglais |
| Niveau d'entrée | BAC +3 |
| Durée | 2 ans |
| ECTS | 120 |
| Volume global d'heures | 850 |
| Formation à distance | Non, uniquement en présentiel |
| Régime d'études | • FI (Formation initiale) |
| Niveau RNCP | Niveau 7 |
| Disciplines | <ul style="list-style-type: none"> • Biochimie et biologie moléculaire • Biologie cellulaire • Biologie des organismes • Chimie organique, minérale, industrielle • Mathématiques appliquées et applications des mathématiques • Morphologie et morphogenèse • Chimie théorique, physique, analytique • Physique - Milieux denses et matériaux • Biophysique et imagerie médicale |
| Lieu | Strasbourg |
| Campus | • Campus Esplanade |
| Secteurs d'activité | <ul style="list-style-type: none"> • Enseignement secondaire • Enseignement supérieur et post-secondaire non supérieur • Enseignement • Programmation, conseil et autres activités informatiques • Activités pour la santé humaine • Recherche-développement scientifique • Télécommunications • Recherche-développement en sciences physiques et naturelles • Fabrication de composants et cartes électroniques |
| Code ROME | <ul style="list-style-type: none"> • Recherche en sciences de l'Univers, de la matière et du vivant • Enseignement supérieur |
| Stage | Obligatoire |

Strasbourg (ESBS) et avec les *Instituts Thématiques Interdisciplinaires* ITI/EUR HiFunMat, IRMIA++ et QMat. Après une première année de formation généraliste fortement mutualisée, il propose 6 parcours orientés vers la recherche -Astrophysics and data science (Astro); Physics of Quantum and Soft Condensed Matter (PhyQS); Cell physics; Radiation physics, detector, instrumentation and imaging (PRIDI); Subatomic and astroparticle physics (SAP) and Quantum Technologies-European Program -s'appuyant sur les laboratoires Strasbourgeois et un parcours permettant de préparer le concours de recrutement de l'Agrégation de Physique-Chimie-Option Physique.

Objectifs

English version:

The objectives of the second year program are to train students in physics, biology, chemistry, and maths, with practicals. The focus is targeted on biological functions and translations between scientific fields.

- **Topics:** Systems biology, Cell physics, Developmental biology, Statistical mechanics, Collective effects, Experimental physics, Chemical biology.
- **Practicals:** Molecular biology, Cell biology, Developmental biology, Numerical simulations, Machine shop, Microfabrication and microfluidics, Electronics, Imaging.

Students who have completed this training will have an in-depth understanding of living matter and its complexity. With basic courses in biology, physics, math, chemistry, students from all scientific backgrounds will be prepared to follow the courses of 20 teachers from Europe with these integrated courses. Periodic meetings will allow the ideas presented during courses and in this interdisciplinary area to be discussed. Introductions to scientific writing and patents will be given during the year.

Version française:

Les objectifs de la deuxième année de formation consistent à former des étudiants en physique, en biologie, en chimie, en maths, avec des travaux pratiques intégrés. La direction pédagogique vise à identifier et à expliquer des fonctions biologiques en établissant des traductions entre disciplines scientifiques.

- Sujets : biologie des systèmes, physique cellulaire, biologie du développement, physique statistique, effets collectifs, physique expérimentale, chimie biologique.
- Travaux pratiques : biologie moléculaire, biologie cellulaire, biologie du développement, simulation numérique, atelier de fabrication, microfabrication et microfluidique, électronique, imagerie quantitative.

Les étudiants qui auront suivi cette formation auront une compréhension approfondie de la matière vivante et de sa complexité.

Avec les cours de base en biologie, en physique, en maths, en chimie, les étudiants de toute formation scientifique seront préparés pour suivre les cours des 20 enseignants venant d'Europe avec ces cours intégrés.

Des réunions périodiques permettront de débattre les idées présentées pendant les cours et dans ce domaine interdisciplinaire. Des introductions à l'écriture scientifique et aux brevets seront données pendant l'année.

Métiers visés

This program prepares for doctoral studies in France and abroad. It leads to jobs in the public and private sectors (scientists, engineers, lecturers, project managers, journalists).

Pour connaître en détail l'insertion professionnelle de nos diplômés, consultez [cette page](#).

Critères de recrutement

Please refer to the [Cell Physics website](#) for information

Candidater

- Find out the information relative to [admission and registration on the site of the University of Strasbourg](#)
- Pour connaître les modalités de candidature, consultez [la page dédiée](#) sur le site de l'Université de Strasbourg.
